

This is an example of correct abstract for the 17th Congress of the European Society for Photobiology (Pisa, Italy, 4-8 September 2017). It is a PDF file because it is an example. However the correct file type is DOCX, DOC or RTF.

Page size is 12.0 by 19.0 cm. Upper and lower margins are 2.3 and 2.0 cm, respectively; left and right ones are 1.5 cm. The font is Times New Roman, 9 pt.

Authors' names and affiliations must not written in the abstract.

The following text is taken from the novel *The War of the Worlds* by Herbert George Wells (1866 – 1946).

“No one would have believed in the last years of the nineteenth century that this world was being watched keenly and closely by intelligences greater than man's and yet as mortal as his own; that as men busied themselves about their various concerns they were scrutinised and studied, perhaps almost as narrowly as a man with a microscope might scrutinise the transient creatures that swarm and multiply in a drop of water. With infinite complacency men went to and fro over this globe about their little affairs, serene in their assurance of their empire over matter. It is possible that the infusoria under the microscope do the same. No one gave a thought to the older worlds of space as sources of human danger, or thought of them only to dismiss the idea of life upon them as impossible or improbable. It is curious to recall some of the mental habits of those departed days.

Yet across the gulf of space, minds that are to our minds as ours are to those of the beasts that perish, intellects vast and cool and unsympathetic, regarded this earth with envious eyes, and slowly and surely drew their plans against us. And early in the twentieth century came the great disillusionment.

We have learned now that we cannot regard this planet as being fenced in and a secure abiding place for Man; we can never anticipate the unseen good or evil that may come upon us suddenly out of space. It may be that in the larger design of the universe this invasion from Mars is not without its ultimate benefit for men; it has robbed us of that serene confidence in the future which is the most fruitful source of decadence, the gifts to human science it has brought are enormous, and it has done much to promote the conception of the commonweal of mankind.”
